PERFECT COMBINATION

COMBINES

Lumiskin 4.00% - Sederma France

INCI : Caprylic/Capric Triglyceride - Diacetyl Boldine (DAB)

A Natural Alkaloid which Regulates

Tyrosinase Activity via **2 Key Factors**

- DAB (Lumiskin) presents an alpha1androgenic antagonist activity AND
- Controls activity on the calcium flow

Benefit:

- Controlled Ca+ flow - resists catecholamine's triggering activity to signal alpha 1 - alpha 2 receptors on melanocyte **responsible to activate** Tyrosinase. Thus - With Controlled Clacium Flow
- Tyrosinase is **STABILISED** in its **INACTIVE FORM** - preventing further chain reactions of Melanogenesis Cycle to produce MELANIN

Alpha Arbutin 1.00%

(a Glycosylated Hydroquinon extracted from the bearberry plant)

- Most Stable Tyrosinase Inhibitor
- Provides Skin Lightening Effect at its BEST
- Stable against oxidative & light damage unlike Hydroquinone, Kojic Acid, Beta Arbutin.

Niacinamide 2.00% - Vitamin B3

- Improves Skin Elasticity
- Revives Skin's Healthy Tone and Texture

Vitamin E 0.50%

- Time Tested Oil Soluble Antioxidant

Stable Vitamin C 3.00%

- Along with Vitamin E - acts as perfect antioxidant couple keeping Melanogenesis cycle working normally.
- Makes skin spotless & luminous

KEEPS SKIN SPOTLESS & LUMINOUS

QUALITY Skin Care Soap

Chlorhexidine Gluconate (20%) Soln. 1.00%

A Broad Spectrum Biocide

- effective against gram +ve and gram -ve bacteria
- Inactivates pathogens and has quicker kill rate compared to other antimicrobial

Mode of action

Positively charged Chlorhexidine molecule is attracted to the Negatively charged phospholipids in bacterial cell wall.

Chlorhexidine binds to the cell wall causing it to rupture.

The rupturing of bacterial cell wall causes fluid to leak leading to lysis and cell death.
